# Architecture and integration

CONTOSO FICTIONAL DEMO - approved content for this scenario only.

Source-ID: KB-ARCH | Version: v2 | APPROVED | Effective: 2026-10-01 | Scenario: 2026-10-13

## Section 1

Design basis: separate staff, guest, payment and management zones; deny inter-zone traffic unless explicitly approved. Redundant uplinks require independently powered paths. Configuration and identity changes require bank sign-off.

## Section 2

Integration: the bank supplies address ranges, VLANs, DNS, identity metadata and monitoring endpoints. No preinstalled connector, topology drawing, lab result or 400-endpoint capacity benchmark is approved in this pack.

## Section 3

Responsibilities: supply includes hardware and design; managed operations is a separately priced service. Bank owns applications, payment controls, cabling and site access. Configuration exports are required at handover; vendor-specific settings require review.
