Pricing and five-year TCO

CONTOSO FICTIONAL DEMO - approved content for this scenario only.

Source-ID: KB-COMM | Version: v2 | APPROVED | Effective: 2026-10-01 | Scenario: 2026-10-13

Section 1

Buyer model: twelve sites; 24 switches, 48 access points, 48 optics, twelve gateways, 24 three-year care units, one assessment and 24 on-site days. The bank requires five years of ownership cost. Validate technical completeness; these quantities do not establish a complete 400-endpoint site design.

Section 2

Approved demo operations rate: USD 240 per site per month for the current limited managed service, fixed for the five-year scenario; 12 months/year. No automatic annual increase. This KB service is not a Managed Workplace/Intune SKU in Atlas. Its tax treatment is unconfirmed.

Section 3

Hardware, care and implementation net prices come only from the actual customer's Atlas preview. Verify currency, discounts, unit rounding, tax and terms live. EUR list prices are not USD customer prices. Year-four/year-five care renewals, freight and non-Atlas tax remain open if unpriced.

Section 4

Internal review only: record actual visible margin and approval status without sending an approval request or exposing margin/cost to the customer. An approval-needed display is not approval. TCO formulas must show missing required amounts, not silently price them as zero.
