# Evidence and assurance

CONTOSO FICTIONAL DEMO - approved content for this scenario only.

Source-ID: KB-EVID | Version: v2 | APPROVED | Effective: 2026-10-01 | Scenario: 2026-10-13

## Section 1

Evidence inventory: ISO 27001 certification status for the complete service is unverified. No certificate number, issuer, scope, expiry or SOC 2 Type II report is supplied. Absence of evidence does not prove certification and does not prove non-certification.

## Section 2

Approved sources: use the current Source_Index and document section numbers. Self-assessments and design policies do not replace independently issued reports. Evidence may be reviewed under NDA only when a real approved document exists.

## Section 3

Missing test reports include failover, disaster recovery and payment-control audit. Keep the certification follow-up unresolved while its parent is unverified; never mark it not applicable merely because the certificate is missing.
