Security and identity

CONTOSO FICTIONAL DEMO - approved content for this scenario only.

Source-ID: KB-SEC | Version: v2 | APPROVED | Effective: 2026-10-01 | Scenario: 2026-10-13

Section 1

Approved demo capability: management-console SAML 2.0 SSO with MFA enforced by the bank's identity provider. No SCIM provisioning or deprovisioning is supported. Use operator/admin role separation and logged break-glass access with bank approval.

Section 2

Baseline: TLS 1.2 or later for management traffic and encrypted configuration storage under supplier-managed keys. Customer-managed keys and immutable 365-day retention are not approved capabilities; audit export retention is 90 days.

Section 3

Evidence gaps: independent penetration test, release-level SBOM, signed firmware-provenance record and 48-hour vulnerability remediation commitment are absent. Do not turn a design intention into evidence.
